

Physics & Astronomy Colloquium

Fall 2010

Summer Research Experiences

Research experience for undergraduate students is almost essential for those planning on going to graduate school. One way to gain such experience is via a Summer Research Programs. The National Science Foundation sponsors many of these programs at research universities and national laboratories via the REU (Research Experiences for Undergraduate) Program; but there are other similar programs available, too. Last summer, several Sacramento State students participated in such programs; two of them, Sasha Moskaleva and Charles Dresser, will be sharing their experiences. Sasha worked at CERN and Charles was based at UC Davis. Learn about the kind of work summer programs may offer, what you learn about being in a research environment, and how one goes about applying for such programs.

Sasha Moskaleva and Charles Dresser
Sacramento State Physics Majors

Thursday, September 9, 2010
4:00-5:20 PM - MND 1015

Open and free to all students, faculty, and public
