

Physics & Astronomy Colloquium

Fall 2010

Astrobiology: the Old and the New in the Search for Extraterrestrial Life

Astrobiology has become an important multidisciplinary branch of science. I will introduce the topic, describe some of the history leading up to the current "golden era" of astrobiology, and discuss some important contemporary topics such as SETI, the possibility of life on Europa and Titan, and recent work in the search for extrasolar planets.
