

# Physics & Astronomy Colloquium

Spring 2010

## *Physics in the Real World*

*but first, what is*

## **REALITY?**

*As Physics graduates enter the “real world,” they are confronted with a wide spectrum of opportunities and challenges. This lecture will trace the core elements of a physics/science/math education through a career in multiple technical fields having a diverse set of unique problems to solve. Using “real world” examples, it will provide brief “case studies” on how these problems were addressed and what physics/science/math courses in your CSU Sacramento curricula helped to solve them. Career opportunities for Physics/Science majors will also be discussed along with some tips on how to land the job of your dreams!*

## Joe DeWitt

Sacramento State Alumnus

Program Engineer, Raytheon Vision Systems

Thursday, April 22, 2010

4:00-5:20 PM - MND 1015

Open and free to all students, faculty, and public
