| **1.** When non-potable water is piped through a facility, are outlets or taps posted to alert employees that it is unsafe and not to be used for drinking, washing or other personal use? | Yes □ No □ | Comments: ___________________________  
_________________________________________________________________  
_________________________________________________________________  
_________________________________________________________________ |
| **2.** When hazardous substances are transported through above ground piping, is each pipeline identified at points where confusion could introduce hazards to employees? | Yes □ No □ | Comments: ___________________________  
_________________________________________________________________  
_________________________________________________________________  
_________________________________________________________________ |
| **3.** When color painting identifies pipelines, are all visible parts of the line so identified? | Yes □ No □ | Comments: ___________________________  
_________________________________________________________________  
_________________________________________________________________ |
| **4.** When pipelines are identified by color painted bands or tapes, are the bands or tapes located at reasonable intervals and at each outlet, valve or connection? | Yes □ No □ | Comments: ___________________________  
_________________________________________________________________  
_________________________________________________________________ |
| **5.** When pipelines are identified by color, is the color code posted at all locations where confusion could introduce hazards to employees? | Yes □ No □ | Comments: ___________________________  
_________________________________________________________________  
_________________________________________________________________ |
| **6.** When the contents of pipelines are identified by name or name abbreviation, is the information readily visible on the pipe near each valve or outlet? | Yes □ No □ | Comments: ___________________________  
_________________________________________________________________  
_________________________________________________________________ |
7. When pipelines carrying hazardous substances are identified by tags, are the tags constructed of durable materials, the message carried clearly and permanently distinguishable and are tags installed at each valve or outlet?  
**Yes □ No □**  
Comments: _______________________

8. When electricity, steam or other external source heats pipelines, are suitable warning signs or tags placed at unions, valves, or other serviceable parts of the system?  
**Yes □ No □**  
Comments: _______________________

9. Are open lights, open flames, or sparking or arcing equipment prohibited near fueling or transfer of fuel operations?  
**Yes □ No □**  
Comments: _______________________

10. Is smoking prohibited in the vicinity of fueling operations?  
**Yes □ No □**  
Comments: _______________________

11. Are fueling operations prohibited in building or other enclosed areas that are not specifically ventilated for this purpose?  
**Yes □ No □**  
Comments: _______________________

12. Where fueling or transfer of fuel is done through a gravity flow system, are the nozzles of the self-closing type?  
**Yes □ No □**  
Comments: _______________________
