## JUSTIFICATION:

**Title change:** This was done to more accurately communicate the content of the course.

**Prerequisite Change**

From: CE 137, may be taken concurrently  
To: CE 137  
CE 137 introduces the topics that are covered in greater depth in this technical elective course. To accommodate students taking CE 137 concurrently (the old prerequisite), a significant fraction of time in this class had to be given to CE 137 topics. By requiring students to finish CE 137 before taking this course, this duplication of coverage is eliminated and more time will be available for advanced topics in this course.

**NEW COURSE DESCRIPTION:** (Not to exceed 80 words, and language should conform to catalog copy. See http://www.csus.edu/acaf/univmanual/crspsl.htm - Guidelines for Catalog Course Description)

Civil Engineering design problems in open channel flow. Model design, pressure problems, design application of hydraulic analysis in structures, transitions, culverts, weirs and spillways. Channel design including roughness for subcritical and supercritical flow. Analyzes and design problems in steady, uniform, gradually and rapidly varied flow. Prerequisite: CE 137; may be taken concurrently.
