**JUSTIFICATION:**
This course is part of the proposed Minor in Information Security and Computer Forensics, which is intended for students in Criminal Justice and related fields. Information Assurance and Security is an area of emerging significance; the proposed minor is intended to educate future professionals in computer and telecommunications crime investigation and evidence processing. Additionally, Computer Science hopes to reverse its present negative trend in enrollment by taking this interdisciplinary approach.

**NEW COURSE DESCRIPTION:** (Not to exceed 80 words, and language should conform to catalog copy. See [http://www.csus.edu/aaca/ummanual/crsps1.htm](http://www.csus.edu/aaca/ummanual/crsps1.htm) - Guidelines for Catalog Course Description) Topics include the security principle of success, architecture and models, business continuity planning, cryptography, application development security, access control, operating systems security, database security, introduction to computer forensics, web security, Internet security protocols, and security management. Course includes projects involving practical computer security tools.

**Note:**

**Prerequisite:** CSC 010, CSC 080

**Corequisite:**

**CAN (California Articulation Number):**

**How Many Times Can This Course be Taken for Credit?** Once
FOR NEW COURSE PROPOSALS OR SUBSTANTIVE CHANGES ONLY:

Description of the Expected Learning Outcomes: Describe outcomes using the following format: “Students will be able to: 1), 2), etc.” See the example at http://www.csus.edu/acaf/example.htm

Students will gain:
A thorough understanding of:
1. Information Assurance and Security best practices
2. Threats, risks, and vulnerabilities to information systems; countermeasures available to address these threats
A basic understanding of:
1. Internet/web security
2. Host security
3. Tools for information security
Exposure to:
1. Cyber forensics
2. TCP/IP protocol suite
3. Career paths in information security
4. Ethical issues related to information security
5. Policy and administration of site security

**Attach a list of the required/recommended course readings and activities [Note: it is understood that these are updated and modified as needed by the instructor(s).] This attachment should be forwarded only to your Dean's office, not Academic Affairs.

Assessment Strategies: A description of the assessment strategies (e.g., portfolios, examinations, performances, pre- and post-tests, conferences with students, student papers) which will be used by the instructor to determine the extent to which students have achieved the learning outcomes noted above:

Examinations, lab projects, term paper.

For whom is this course being developed?

Major(s) in the Dept: __________ Majors of other Depts: __________ Minors in the Dept: __________ General Education: __________ Other: __________

Is this course required in a degree program (major, minor, graduate degree, certificate? Yes: X No: __________

If yes, identify program(s): __________

Does the proposed change or addition cause a significant increase in the use of College or University resources (lab room, computer facilities, faculty, etc.)? Yes: __________ No: X __________

If yes, attach a description of resources needed and verify that resources are available.

Indicate which department or programs will be affected by the proposed course (if any).

The Department Chair's signature below indicates that affected programs have been sent a copy of this proposal form.

Approvals: If proposed change, new course or deletion is approved, sign and date below. If not approved, forward without signing to the next reviewing authority, and attach an explanatory memorandum to the original copy.

Signatures: ____________________________ Date: __________

Department Chair: ____________
College Dean or Associate Dean: ____________
CPSP (for school personnel courses ONLY): ____________
Associate Vice President and Dean for Academic Programs: ____________

Date: ____________

Distribution: Academic Affairs (original), Department Chair and College Dean. Dean's office to send original after approval to Jerri McAtee at zip 6016. An electronic copy must also be sent to mcateej@csus.edu.
New Course Proposal

CSC 114 – Fundamentals of Information Assurance & Security

By Isaac Ghansah

This document comprises a proposal for a new course to be part of the Minor in the Computer Science Department titled Information Security and Computer Forensics. This proposed course represents an introduction to a number of key topics related to the field of information assurance and security, as well as legal issues involved in computer systems security.
COURSE DESCRIPTION

Department and Course Number:  CSC 114  
Course Coordinator: Isaac Ghansah

Course Title: Fundamentals of Information Assurance and Security  
Total Credits: 3

Catalog Description: Topics include security principle of success, architecture and models, business continuity planning, cryptography, application development security, access control, operating systems security, database security, introduction to computer forensics, web security, Internet security protocols, and security management. Course includes projects involving practical computer security tools. Prerequisite: CSC 010, CSC 080

References

Course Goals
- To develop knowledge of information security and assurance best practices.
- To develop understanding of the importance of securing information efficiently, the threats, risks, and vulnerabilities to information, and the controls available to address these threats.
- To study management practices and proficiency in the use of selected software tools for securing systems.

Prerequisites by Topic
Thorough understanding of:
1. Webpage design and layout including HTML tables and forms

Basic understanding of:
1. Fundamental properties of algorithms and programming
2. How to use Windows and/or Linux operating systems

Exposure to:
1. Elementary working knowledge of a commonly used applications programming language
2. Internet protocols such as HTTP and TCP/IP
Major Topics Covered in the Course

- Introduction to Information Assurance and Security, threats to information, importance of information security (3 hours)
- Risk assessment and security management (3 hours)
- How contemporary computer systems are organized (1 hour)
- Access control techniques and models including 2-factor authentication, social engineering, and biometrics (3 hours)
- Telecommunications, network security and network fundamentals: logical and physical topologies, introduction to TCP/IP, and hardware architecture (6 hours)
- Cryptography including Advanced Encryption Standard (3 hours)
- Security architecture and models (3 hours)
- Operations security (3 hours)
- Applications, system development, and database security (3 hours)
- Business continuity planning – disaster recovery planning (3 hours)
- Law, investigation, ethics, U.S. Patriot Act, Digital Millennium Copyright Act (DMCA), and recent rulings (3 hours)
- Introduction to host-based perimeter detection and network-based perimeter detection, physical security (3 hours)
- Methods of attacks, Honeypots and Honeynets, firewalls and perimeters, trap and trace tools such as Echelon (3 hours)
- Government information assurance regulations (3 hours)
- System security engineering, future threats and countermeasures (2 hours)

Outcomes

**Thorough understanding of:**
1. Information Assurance and Security best practices
2. Threats, risks, and vulnerabilities to information systems; countermeasures available to address these threats

**Basic understanding of:**
1. Internet/web security
2. Host security
3. Tools for information security

**Exposure to:**
1. Cyber forensics
2. TCP/IP protocol suite
3. Career paths in information security
4. Ethical issues related to information security
5. Policy and administration of site security
Laboratory Projects
- Windows and Linux/Unix vulnerability analysis
- Internet research and reporting on security topics such as biometrics, computer system laws, certifications, security advisories, etc.
- Linux and Windows security tools and techniques
- Security reporting, monitoring and auditing
- File system security and cryptography
- Use of hands-on hacking tools such as nmap
- Firewalls, personal and commercial grade

Oral and Written Communications
Students will be required to write a term paper on information security issues.

Social and Ethical Issues
It will be made clear that the students should not use their knowledge and skills with any malicious intent against the university network, any other networks, physical computing resources, or humans. Students will be required to sign an agreement to observe a set of legal and ethical guidelines.

Theoretical Content
The course covers an overview of cryptographic algorithms and applies cryptography to secure communication applications. Access control principles are also covered.

Problem Analysis
A given configured system will be analyzed in a rigorous manner to determine to what extent it is secure.

Solution Design
Students will learn how to discover security weaknesses and mitigate the identified weakness in the system.
