

# DiMAGE Scan Dual IV

## Scanning Slides

---

### WHAT

DiMAGE Scan Dual IV converts film slides and negatives into digital images. Due to the high quality of its scans, print enlargements can be as large as 22.8 inches x 15 inches at 200dpi inkjet output. Furthermore, the optical system is designed specifically for film scanning produces excellent color fidelity and sharpness.

---

### WHY

Convert your old slide presentations to help your students understand course material and to motivate class and group discussions. Use these new digital images to enhance your course and meet the different learning needs and styles of your students.

---

### WHEN

- Film images that have faded with time or suffer from over or under-exposure, backlighting, color casting, and more can be optimized and restored.
- If you now use PowerPoint for your in-class and online presentations, convert your old film slides and negatives so they can be used to enhance your PowerPoint presentations.
