Terms

Ascender

Stroke on a lowercase letter that rises above the meanline.

Baseline

An imaginary horizontal line upon which the base of each capital letter rests.

Cap height

Height of the capital letters, measured from the baseline to the capline.

Capline

Imaginary horizontal line defined by the height of the capital letters.

Counter

Space enclosed by the strokes of a letter form

Descender

Stroke on a lowercase letter form that falls below the baseline.

Display type

Type sizes 14 point and above, used primarily for headlines and titles.

Font

A complete set of characters in one design, size, and style. In traditional metal type, a font meant a particular size and style; in digital typography a font can output multiple sizes and even altered styles of a typeface design.

Grid

Underlying structure composed of a linear framework used by designers to organize typographic and pictorial elements.

Gutter

The interval separating two facing pages in a publication.

Italic

Letter forms having a pronounced diagonal slant to the right.

Kerning

In typesetting, the process of subtracting space between specific pairs of characters so that the overall letterspacing appears to be even.

Leading

In early typesetting, strips of lead were placed between lines of type for spacing, hence the term. The vertical distance between two lines of type measured from baseline to baseline.

Meanline

An imaginary line marking the tops of lowercase letters, not including the ascenders.

Pica

Typographic unit of measurement: 12 points equal 1 pica. Six picas equal approximately one inch. Line lengths and column widths are sometimes measured in picas.

Point

A measure of size used principally in typesetting. One point is equal to 1/12 of a pica, or approximately 1/72 of an inch. It is most often used to indicate the size of type or amount of leading added between lines.

Sans serif

Typefaces without serifs.

Serifs

Small elements added to the ends of the main strokes of a letter form in serified type styles.

Tracking

The overall tightness or looseness of the spacing between all characters in a line or block of text. Sometimes used interchangeably with kerning, which more precisely is the reduction in spacing between a specific pair of letters.

Typeface

The design of alphabetical and numerical characters unified by consistent visual properties.
