

Week 6: Volcanoes Worksheet

Name: _____

You are hiking up to the top of a stratovolcano with a couple of friends, Francisco and Jabbari. When you get to the crater at the top of the volcano and see this:

Francisco is all for going down there and climbing to the top of the mound to check it out. He is sure that it is completely safe.

Jabarri is not so sure and thinks maybe they should turn around and head back down.

They know that you just finished an Earth Science class, so ask you what you think – should you go or should you stay? You think about it, and then chose.

- What did you choose (stay and climb the mound, or get the heck out of there)?
- Jabbari and Francisco don't want to waste this totally awesome climb. So, you need to explain your choice to them **in as much detail as possible** to convince them that you know what you are talking about and that this is the right choice.

Record the conversation you have with your two friends here (and make it convincing!):
