

Students & Faculty... You are invited.

General Motors – the world’s largest automobile maker – is a true industry leader in E85 capable vehicles. GM has been selling E85 flexible fuel vehicles since 2000, and today produces more of these vehicles than any other manufacturer. GM has more than 2 million E85 FlexFuel vehicles on the road in all 50 states, and will produce even more this year, including SUVs, trucks, and mid-size cars.

GM is going beyond building FlexFuel vehicles. Collaborating with the State of California, they are working to help bring ethanol stations to California - an important first step in helping create and grow an E85 refueling infrastructure.

The GM Fuel Economy Tour
