Justification for course proposal:

Undergraduate CE courses are being renumbered to clarify course pre- and co-requisites and topic areas to help students plan their path to graduation. Prerequisites numbers (not courses) are being changed to reflect course number changes.

Through curriculum paper forms in 2016, each CE course had the "Not currently enrolled in CE XXX" as a prerequisite approved, so that students could not register for a "CE" prefix course if they were currently enrolled in it. This was to prevent students who thought they were failing from giving up or taking up a seat they didn't need if they passed the course. That prefix managed to make it into the online system for only one or two classes and is being put through curriculum workflow again.

Course Description: (Not to exceed 80 words and language should conform to catalog copy.)

Students will be able to:

1. Describe and apply the fundamentals of water pollution to solve basic environmental engineering problems
2. Perform preliminary design calculations for principal components in water and wastewater treatment processes
3. Describe major stormwater pollutants, their sources, effects and mitigation measures
4. Describe major air pollutants, their sources, health and environmental effects, and fates
5. Identify common control strategies and technologies for air pollution
6. Identify and evaluate potential environmental impacts and sustainability issues for engineering projects
7. Describe the connections between climate change and civil engineering practice

Attach a list of the required/recommended course readings and activities:
