About a third of Sacramento State’s students are the first in their family to attend college. It’s an experience Biology Professor Ron Coleman can relate to as a first-generation student himself. “I try to get students involved and get them to take that leap,” said Coleman, who runs the Evolutionary Ecology of Fishes Laboratory and serves as Interim Director of the Student Research Center at Sacramento State. “If we can expose them to these ideas, it’s like they see there’s another world out there; and we want them to see that they are part of it.”

Coleman leads university-wide research activities such as poster presentations and engagement events. He invites cohorts of students to be part of his research trips to Costa Rica. “A lot of times when students talk about research they’ll say, ‘they discovered something.’ And I try to get them into the mindset that it’s ‘we’ or I, ‘I discovered something,’” Coleman said.

Coleman’s student-centric approach has made all the difference in his students’ lives over the years, such as alumnus Ameer Thompson ’05.

“Dr. Coleman was instrumental in helping me understand that I could do this,” Thompson said. Thompson, who was a student in Sacramento State’s Science Educational Equity (SEE) program, started working in Coleman’s lab—first as part of the team that set up the lab and eventually as Coleman’s lab assistant.

“Before I didn’t really know science could be anything beyond what you study in a book. He helped me understand what it means to be a scientist and helped me feel like I was a scientist,” said Thompson, who is a Sacramento State donor, naming a SEE program scholarship in honor of his mother.

After graduating from Sacramento State, Thompson earned his Ph.D. at Cornell University and served as an interim dean at Contra Costa College. He is now Dean of Science and Technology at Cañada College in Redwood City, California. It is an accomplished career that Thompson says all started with Coleman’s encouragement.

“Dr. Coleman is always willing to go above and beyond and looking for ways for students to be great;” Thompson said. Coleman said what he does is just part of Sacramento State’s teaching mission and culture. He added that the teaching mission is why the On the Rise campaign is so important.

“Higher education gives people a chance,” Coleman said. “You have to show them, you can do this. If you show people the possibility, then they aim for it.”
