You can submit your applications for the scholarships listed above [here](#).

7. John & Joyce Schaeuble Award for Best Use of Quantitative Data in Psychology: \$1000

Purpose: To provide an award for the best use of quantitative data in psychology by an undergraduate or graduate student in the Psychology Department.

Academic criteria:

- Undergraduate students
 - Minimum GPA: 3.0 overall GPA
 - Must have completed Psychology 121 with a grade of B or better. Preference given to students who have also completed or are currently taking Psychology 102.
- Graduate students
 - Minimum GPA: 3.3 overall GPA
 - Must have completed Psychology 202 with a grade of B or better. Preference given to students who have also completed or are currently taking Psychology 204 and/or Psychology 205.

Research project and report criteria:

- Upload a report for a research project you previously did at Sacramento State that used quantitative methods of data analysis.
 - The report could be a research paper for a course in which you did the research, or a paper or poster you presented at a research conference, such as a regional or national conference of psychologists or a regional or national interdisciplinary conference in which a substantial portion of the program is psychological research.
 - A conference presentation may be in any form that was acceptable for the conference, but it must provide enough information to explain how the research was conducted.
 - Research that involves human subjects must have appropriate Institutional Review Board approval.
 - Students who worked jointly and contributed equally on a project may apply together for an award to be shared, in which case each student must apply and meet the academic criteria for the award.
 - Faculty may be listed as a co-author on a convention presentation, but students applying for the award must have done the report of the research and most of the work on the research.
- Answer the following questions about your research project on the application form:
 - How did the way you conducted this research lead to the particular quantitative methods you used to analyze the data?
 - What other methods of analysis, if any, did you consider for the data? How might those other choices have contributed to an understanding of the data?
 - What assumptions were made about the data in the quantitative methods you used? How were those assumptions evaluated?
 - Describe any limitations with regard to the conclusions from your data analysis. For example, consider the statistical power of the study, the effect sizes of reported results, and confidence intervals for the reported statistics.

Application Deadline: November 30, 2023
