How to Properly Put on and Take off a Disposable Respirator

WASH YOUR HANDS THOROUGHLY BEFORE PUTTING ON AND TAKING OFF THE RESPIRATOR.

If you have used a respirator before that fit you, use the same make, model and size.

Inspect the respirator for damage. If your respirator appears damaged, DO NOT USE IT. Replace it with a new one.

Do not allow facial hair, hair, jewelry, glasses, clothing, or anything else to prevent proper placement or come between your face and the respirator.

Follow the instructions that come with your respirator.

Employers must comply with the OSHA Respiratory Protection Standard, 29 CFR 1910.134 if respirators are used by employees performing work-related duties.

1 Manufacturer instructions for many NIOSH approved disposable respirators can be found at www.cdc.gov/niosh/npptl/topics/respirators/disp_part/

2 According to the manufacturer’s recommendations

For more information call 1-800-CDC-INFO or go to http://www.cdc.gov/niosh/npptl/topics/respirators/
N95 Respirator Use for Those Not Vaccinated Against SARS-CoV-2

Cal-OSHA recommends that employees who are not vaccinated for SARS-CoV-2 (COVID-19) to wear a face covering (2 layer fabric face covering, disposable paper face coverings, or N95). Employers are required to provide N95s to employees to wear voluntarily to protect themselves against SARS-CoV-2, if requested. N95s are only effective against particulates and aerosols as long as:

1. Read and heed all instructions provided by the manufacturer on use, maintenance, cleaning and care, and warnings regarding the respirators limitations.
2. Choose respirators certified for use to protect against the contaminant of concern. NIOSH, the National Institute for Occupational Safety and Health of the U.S. Department of Health and Human Services, certifies respirators. A label or statement of certification should appear on the respirator or respirator packaging. It will tell you what the respirator is designed for and how much it will protect you.
3. Do not wear your respirator into atmospheres containing contaminants for which your respirator is not designated to protect against. For example, a respirator designed to filter dust particles will not protect you against gases, vapors or very small solid particles of fumes or smoke.
4. Keep track of your respirator so that you do not mistakenly use someone else’s respirator.

CDC/NIOSH Recommendations for Reuse of N95 Respirators

- Do not share your N95 respirators with others.
- Limit reuse of N95 respirators up to 5 uses per device.
- Clean hands with soap and water or an alcohol-based hand sanitizer before and after touching or adjusting the respirator (if necessary for comfort or to maintain fit).
- Inspect N95 respirators each time before use. Discard if any part of it is physically damaged:
  - Examples: Straps no longer work. Nose pieces or nose cushions damaged.
- Refer to CDC/NIOSH “How to Properly Put on and Take off a Disposable Respirator” for proper donning (put on) and doffing (take off) of N95 respirators. (See back.) https://www.cdc.gov/niosh/docs/2010-133/pdfs/2010-133.pdf
- Perform seal check every time you use a N95 as referred above.
- Discard N95 respirators contaminated with blood, respiratory or nasal secretions, or other bodily fluids from others (especially in a healthcare setting).
- Discard N95 respirators following close contact with anyone with an infectious disease requiring contact precautions (healthcare setting).
- Discard N95 respirators if it becomes hard to breathe through.
- Use a cleanable face shield (preferred) or a surgical mask over an N95 respirator and/or other steps (e.g., masking patients, use of engineering controls), when feasible to reduce surface contamination of the respirator.
- Keep N95s in a clean, breathable container such as a paper bag between uses. To minimize potential cross-contamination, store respirators so that they do not touch each other and the person using the respirator is clearly identified. Storage containers should be disposed of or cleaned regularly. Allow N95s to sit in breathable container for minimum 3 days.
- Avoid touching the inside of the respirator. If inadvertent contact is made with the inside of the respirator, perform hand hygiene as described above.
