

# SUSTAINABILITY INTERNSHIPS AVAILABLE

## What kinds of fun things will you work on?

Sac State Sustainability is seeking student interns for a variety of projects. Examples of internship opportunities include but aren't limited to:

**BAC Yard Intern:** Interns assist Sac State Sustainability in meeting our 100% organic waste diversion goal through learning about composting and how organic waste is managed in a sustainable way within the University setting. BAC Yard interns learn about beekeeping and honey extraction as well as our food production methods in both traditional soil-grown garden beds at the BAC Yard and Capital Public Radio and our solar-powered aquaponics system at the BAC Yard.

**Carbon Neutrality Intern:** Interns assist Sac State Sustainability in assessing campus greenhouse gas emissions and reductions strategies toward meeting our 2040 carbon neutrality goal.

**Living Building Challenge Intern:** LBC interns work with Sac State Sustainability to transform the award-winning Solar Decathlon House into the first-ever student-built certified LBC building in the country.

**And many other sustainability internship projects...**

Please send resume, hours of availability and any questions to
