Mastering Chemistry Assignments Grading

Mastering Chemistry HW Assignments

- Homework assignments will be up for ~2 weeks before the due dates.
- HW covers the chapter material some of which I don't cover in class.
- There is no time limit for these assignments, other than the due date.
- You should pace yourself with these by working ~1 to 2 hrs a night, spreading the HW out over the course of a week. By doing this you will have time to get the help you need when you get stuck.
- Most assignments will be due Friday at 6 pm.
- Do not wait until the last minute to begin your assignments. You won't finish. (Would you save up 6 days of food only to eat it all in one sitting on Sunday?)
- Work on the problems by completing what you can do 1st then come back to the problems you need help with later.
- You can still work on problems after the due date, you will however receive a 20% per day late deduction on work submitted after the due date.
- Do not search for answers on Google or Yahoo. You may get the points but you won't learn a darn thing!
- Do not copy off of your classmates. (see above)
- I suggest you keep a notebook where you work out all of the HW problems. This will help you if you have questions and for studying.

Mastering Chemistry Discussion Assignments

- These are additional HW assignments that will show up on Tuesdays at 6 pm and they are due Fridays at 6pm.
- They cover material emphasized in the discussion sections.
- Each assignment has a 60 min time limit. Once you start, don't stop. (they usually take ~15–30 min to complete)
- The numbers in all HW problems are randomized so your problems will be different from your classmates.
- If you miss the due date on these assignments, you will receive no credit.

Your overall homework points are weighted to 50% from Mastering Chemistry HW and 50% from your Discussion Assignments.

$$\text{total points} = \text{HW points} \times \% \text{ of MC HW} + \text{Disc. Points} \times \% \text{ Discussion assignments}$$

At exam 1 that is 16.7 points, exam 2 = 25 points, exam 3 = 33 points and final = 50 points for each

All due dates for Mastering Chemistry assignments are firm and will not be extended.
