Hypothesis Testing Procedure

Step 1: Read the claim and write **SC** and **OC**

Step 2: H_0 (must have $=$ **or** $\leq$ **or** $\geq$) and H_1 (must have $\neq$ **or** $>$ **or** $<$)

Based on H_1 decide if it is (left tailed test, right tailed test, or two tailed test).

Step 3: Find the critical value (**z** or **t** by using Table 2) and label the region as **R** for rejection or **A** for acceptance of H_0

Step 4: Test statistics =TS = $\dfrac{\sqrt{n}(\overline{x}-\mu)}{s}$

Step 5: Conclusion: Accept or reject H_0 ? (H_0 will be **rejected if TS falls in critical region** otherwise accepted)

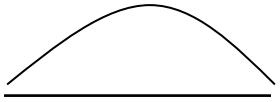
Step 6: Comment: Accept or reject **SC**? Hint: If H_0 and **SC** are similar same decision **otherwise** different decision.

Step 7: P-value is the **area** from **test statistics** and graphically, it is on the same side of critical value and it can be found by using your **TI calculator**.

Problem 1. At $\alpha = 0.05$, test the claim that **average** life of "Cyan" batteries **exceeds** 50 months. A sample of 64 batteries had a mean of 53 months with standard deviation of 9.5 months.

SC: μ Ho: μ $n =$ $\overline{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)



$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\overline{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 2. At $\alpha = 0.05$, test the claim that **average** life of "Cyan" batteries **exceeds** 50 months. A sample of 9 batteries had a mean of 53 months with standard deviation of 9.5 months.

SC: μ Ho: μ $n =$ $\overline{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)

$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\overline{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 3. At $\alpha = 0.05$, test the claim that **average** life of "Cyan" batteries **is** 50 months. A sample of 49 batteries had a mean of 54 months with standard deviation of 9.5 months.

SC: μ Ho: μ $n =$ $\overline{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)

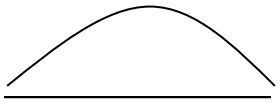
$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\overline{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 4. At α = **0.05**, test the claim that **average** life of "Cyan" batteries **is different than** 50 months. A sample of 9 batteries had a mean of 55 months with standard deviation of 9.5 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)



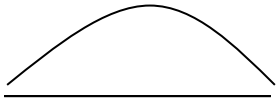
$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 5. At α = **0.01**, test the claim that **average** life of "Cyan" batteries is **at most** 50 months. A sample of 49 batteries had a mean of 53 months with standard deviation of 8.8 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)



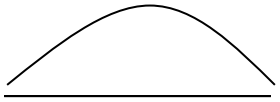
$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 6. At α **=0 .01**, test the claim that **average** life of "Cyan" batteries is **at most** 50 months. A sample of 16 batteries had a mean of 53 months with standard deviation of 9.4 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)



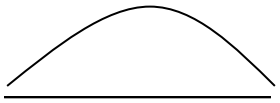
$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 7. At α **= 0.10**, test the claim that **average** life of "Cyan" batteries is **at least** 50 months. A sample of 36 batteries had a mean of 46 months with standard deviation of 10 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)



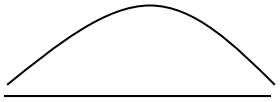
$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 8: At $\alpha = 0.10$, test the claim that **average** life of "Cyan" batteries is **at least** 50 months. A sample of 16 batteries had a mean of 47 months with standard deviation of 10 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)



$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 9: At α **=0 .025**, test the claim that **average** life of "Cyan" batteries is **less than** 50 months. A sample of 36 batteries had a mean of 46 months with standard deviation of 12 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)

$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Problem 10: At $\alpha = 0.025$, test the claim that **average** life of "Cyan" batteries is **less than** 50 months. A sample of 16 batteries had a mean of 48 months with standard deviation of 13 months.

SC: μ Ho: μ $n =$ $\bar{x} =$ $s =$

OC: μ $H_{1:}$ μ (left tailed test or two tailed test or right tailed test)

$\alpha =$ and $n =$ then ***CV*** = **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} =$ _____ =

Conclusion: Accept or reject H_0 **Comment:** Accept or reject ***SC*** ***P-Value*** = α

Solution

Hypothesis Testing Procedure (Rejection Region Method)

Step 1: **SC** and **OC** **Step 2:** H_0 and H_1. Decide if it is (left tailed test, right tailed test, or two tailed test).

Step 3: Find the critical value (**z** or **t** by using Table 2) and label the region as **R** for rejection or **A** for acceptance of H_0

Step 4: **Test statistics =TS =** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s}$

Step 5: Conclusion: Is H_0 accepted or rejected? (H_0 will be **rejected if TS falls in critical region** otherwise accepted)

Step 6: Comment: Is **SC** accepted or rejected?

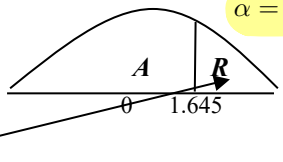
Step 7: Find **P-value- by** using your **TI calculator**.

Problem 1. At **α = 0.05**, test the claim that **average** life of "Cyan" batteries **exceeds** 50 months. A sample of 64 batteries had a mean of 53 months with standard deviation of 9.5 months.

SC: $\mu > 50$ Ho: $\mu \le 50$ $n = 64$ $\bar{x} = 53$ $s = 9.5$

OC: $\mu \le 50$ H_1: $\mu > 50$ (left tailed test, two tailed test, or ***right tailed test***)

$n = 64$
$\alpha = .05$



α = 0.05 and $n = 64$ then ***CV*** $= 1.645$ **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} = \dfrac{\sqrt{64}(53-50)}{9.5} = 2.526$

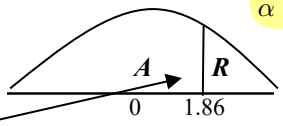
Conclusion: Accept or **reject** H_0 **Comment: Accept** or reject ***SC*** ***P-Value*** $= 0.0058 < \alpha$

Problem 2. At **α =0.05**, test the claim that **average** life of "Cyan" batteries **exceeds** 50 months. A sample of 9 batteries had a mean of 53 months with standard deviation of 9.5 months.

SC: $\mu > 50$ Ho: $\mu \le 50$ $n = 9$ $\bar{x} = 53$ $s = 9.5$

OC: $\mu \le 50$ H_1: $\mu > 50$ (left tailed test, two tailed test, or ***right tailed test***)

$n = 9$
$\alpha = .05$



α = 0.05 and $n = 9$ then ***CV*** $= 1.86$ **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} = \dfrac{\sqrt{9}(53-50)}{9.5} = 0.947$

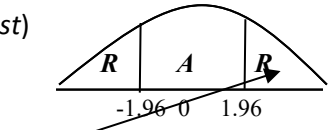
Conclusion: **Accept** or reject H_0 **Comment:** Accept or **reject *SC*** ***P-Value*** $= 0.1856 > \alpha$

Problem 3. At **α = 0.05**, test the claim that **average** life of "Cyan" batteries **is** 50 months. A sample of 49 batteries had a mean of 54 months with standard deviation of 9.5 months.

SC: $\mu = 50$ Ho: $\mu = 50$ $n = 49$ $\bar{x} = 54$ $s = 9.5$

OC: $\mu \ne 50$ H_1: $\mu \ne 50$ (left tailed test, **two tailed test,** or *right tailed test*)

$n = 49$
$\alpha = .05$



α = 0.05 and $n = 49$ then ***CV*** $= \pm 1.96$ **TS=** $\dfrac{\sqrt{n}(\bar{x}-\mu)}{s} = \dfrac{\sqrt{49}(54-50)}{9.5} = 2.947$

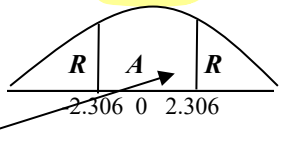
Conclusion: Accept or **reject** H_0 **Comment:** Accept or **reject *SC*** ***P-Value*** $= 0.0032 < \alpha$

Problem 4. At α = **0.05**, test the claim that **average** life of "Cyan" batteries **is different than** 50 months. A sample of 9 batteries had a mean of 55 months with standard deviation of 9.5 months.

SC: $\mu \neq 50$ Ho: $\mu = 50$ $n = 9$ $\bar{x} = 55$ $s = 9.5$

OC: $\mu = 50$ H_1: $\mu \neq 50$ (left tailed test, **two tailed test,** or *right tailed test*)

$n = 9$
$\alpha = .05$



α = **0.05** and $n = 9$ then ***CV*** $= \pm 2.306$ **TS=** $\frac{\sqrt{n}(\bar{x}-\mu)}{s} = \frac{\sqrt{9}(55-50)}{9.5} = 1.58$

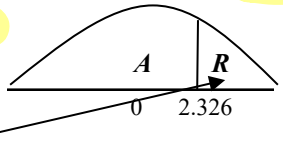
Conclusion: **Accept** or reject H_0 **Comment:** Accept or **reject** ***SC*** ***P-Value*** $= 0.153 > \alpha$

Problem 5. At α = **0.01**, test the claim that **average** life of "Cyan" batteries is **at most** 50 months. A sample of 49 batteries had a mean of 53 months with standard deviation of 8.8 months.

SC: $\mu \leq 50$ Ho: $\mu \leq 50$ $n = 49$ $\bar{x} = 53$ $s = 8.8$

OC: $\mu > 50$ H_1: $\mu > 50$ (left tailed test, two tailed test, or ***right tailed test***)

$n = 49$
$\alpha = .01$



α = **0.01** and $n = 49$ then ***CV*** $= 2.326$ **TS=** $\frac{\sqrt{n}(\bar{x}-\mu)}{s} = \frac{\sqrt{49}(53-50)}{8.8} = 2.386$

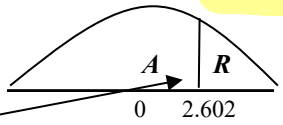
Conclusion: Accept or **reject** H_0 **Comment:** Accept or **reject** ***SC*** ***P-Value*** $= 0.0085 < \alpha$

Problem 6. At α **=0 .01**, test the claim that **average** life of "Cyan" batteries is **at most** 50 months. A sample of 16 batteries had a mean of 53 months with standard deviation of 9.4 months.

SC: $\mu \leq 50$ Ho: $\mu \leq 50$ $n = 16$ $\bar{x} = 53$ $s = 9.4$

OC: $\mu > 50$ H_1: $\mu > 50$ (left tailed test, two tailed test, or ***right tailed test***)

$n = 16$
$\alpha = .01$



α = **0.01** and $n = 16$ then ***CV*** $= 2.602$ **TS=** $\frac{\sqrt{n}(\bar{x}-\mu)}{s} = \frac{\sqrt{16}(53-50)}{9.4} = 1.277$

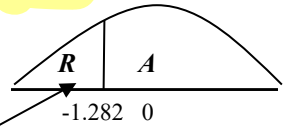
Conclusion: **Accept** or reject H_0 **Comment: Accept** or reject ***SC*** ***P-Value*** $= 0.1106 > \alpha$

Problem 7. At α **= 0.10**, test the claim that **average** life of "Cyan" batteries is **at least** 50 months. A sample of 36 batteries had a mean of 46 months with standard deviation of 10 months.

SC: $\mu \geq 50$ Ho: $\mu \geq 50$ $n = 36$ $\bar{x} = 46$ $s = 10$

OC: $\mu < 50$ H_1: $\mu < 50$ (**left tailed test**, two tailed test, or *right tailed test*)

$n = 36$
$\alpha = .01$



α = **0.10** and $n = 36$ then ***CV*** $= -1.282$ **TS=** $\frac{\sqrt{n}(\bar{x}-\mu)}{s} = \frac{\sqrt{36}(46-50)}{10} = -2.4$

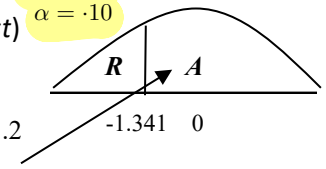
Conclusion: Accept or **reject** H_0 **Comment:** Accept or **reject** ***SC*** ***P-Value*** $= 0.0082 < \alpha$

Problem 8: At $\alpha = 0.10$, test the claim that **average** life of "Cyan" batteries is **at least** 50 months. A sample of 16 batteries had a mean of 47 months with standard deviation of 10 months.

SC: $\mu \geq 50$ Ho: $\mu \geq 50$ $n = 16$ $\bar{x} = 47$ $s = 10$

OC: $\mu < 50$ $H_{1:}\ \mu < 50$ (**left tailed test**, two tailed test, or *right tailed test*)

$n = 16$
$\alpha = \cdot 10$



$\alpha = 0.10$ and $n = 16$ then $CV = -1.341$ **TS=** $\dfrac{\sqrt{n}(\bar{x} - \mu)}{s} = \dfrac{\sqrt{16}(47 - 50)}{10} = -1.2$

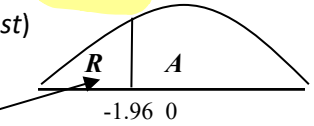
Conclusion: **Accept** or reject H_0 **Comment: Accept** or reject ***SC*** ***P-Value*** $= 0.1243 > \alpha$

Problem 9: At $\alpha = 0$ **.025**, test the claim that **average** life of "Cyan" batteries is **less than** 50 months. A sample of 36 batteries had a mean of 46 months with standard deviation of 12 months.

SC: $\mu < 50$ Ho: $\mu \geq 50$ $n = 36$ $\bar{x} = 46$ $s = 12$

OC: $\mu \geq 50$ $H_{1:}\ \mu < 50$ (**left tailed test**, two tailed test, or *right tailed test*)

$n = 36$
$\alpha = .025$



$\alpha = 0.025$ and $n = 36$ then $CV = -1.96$ **TS=** $\dfrac{\sqrt{n}(\bar{x} - \mu)}{s} = \dfrac{\sqrt{36}(46 - 50)}{12} = -2.0$

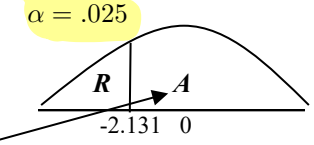
Conclusion: Accept or **reject** H_0 **Comment: Accept** or reject ***SC*** ***P-Value*** $= 0.0228 < \alpha$

Problem 10: At $\alpha = 0.025$, test the claim that **average** life of "Cyan" batteries is **less than** 50 months. A sample of 16 batteries had a mean of 48 months with standard deviation of 13 months.

SC: $\mu < 50$ Ho: $\mu \geq 50$ $n = 16$ $\bar{x} = 48$ $s = 13$

OC: $\mu \geq 50$ $H_{1:}\ \mu < 50$ (**left tailed test**, two tailed test, or *right tailed test*)

$n = 16$
$\alpha = .025$



$\alpha = 0.025$ and $n = 16$ then $CV = -2.131$ **TS=** $\dfrac{\sqrt{n}(\bar{x} - \mu)}{s} = \dfrac{\sqrt{16}(48 - 50)}{13} = -0.615$

Conclusion: **Accept** or reject H_0 **Comment:** Accept or **reject** ***SC*** ***P-Value*** $= 0.2738 > \alpha$
