

### Metric conversions:

Okay, here are some for you to try:

$$1) \ 23.6 \text{ } \cancel{\text{kJ}} \times \frac{1 \times 10^3 \text{ } \cancel{\text{J}}}{1 \text{ } \cancel{\text{kJ}}} = 2.36 \times 10^4 \text{ } \cancel{\text{J}}$$

$$2) \ 58216 \text{ } \cancel{\text{\mu L}} \times \frac{1 \times 10^{-6} \text{ } \cancel{\text{L}}}{1 \text{ } \cancel{\text{\mu L}}} \times \frac{1 \text{ } \cancel{\text{daL}}}{1 \times 10^1 \text{ } \cancel{\text{L}}} = 5.8216 \times 10^{-3} \text{ } \cancel{\text{daL}}$$

$$3) \ 46.875 \text{ } \cancel{\text{TB}} \times \frac{1 \times 10^{12} \text{ } \cancel{\text{B}}}{1 \text{ } \cancel{\text{TB}}} \times \frac{1 \text{ } \cancel{\text{kB}}}{1 \times 10^3 \text{ } \cancel{\text{B}}} = 4.6875 \times 10^{10} \text{ } \cancel{\text{kB}}$$

$$4) \ 22.16 \text{ } \cancel{\text{ms}} \times \frac{1 \times 10^{-3} \text{ } \cancel{\text{s}}}{1 \text{ } \cancel{\text{ms}}} \times \frac{1 \text{ } \cancel{\text{fs}}}{1 \times 10^{-15} \text{ } \cancel{\text{s}}} = 2.216 \times 10^{13} \text{ } \cancel{\text{fs}}$$

$$5) \ 3.78 \times 10^{-2} \text{ } \cancel{\text{Mg}} \times \frac{1 \times 10^6 \text{ } \cancel{\text{g}}}{1 \text{ } \cancel{\text{Mg}}} \times \frac{1 \text{ } \cancel{\text{cg}}}{1 \times 10^{-2} \text{ } \cancel{\text{g}}} = 3.78 \times 10^6 \text{ } \cancel{\text{cg}}$$

### Conversion between systems of measure:

There are several “correct” ways of doing these. If you did them in a different way, but got the same answer, then you did them correctly

$$1) \ 103 \text{ } \cancel{\text{kg}} \times \frac{1 \times 10^3 \text{ } \cancel{\text{g}}}{1 \text{ } \cancel{\text{kg}}} \times \frac{1 \text{ } \cancel{\text{oz}}}{28.3 \text{ } \cancel{\text{g}}} = 3.64 \times 10^3 \text{ } \cancel{\text{oz}}$$

$$2) \ 653 \text{ } \cancel{\text{nm}} \times \frac{1 \times 10^{-9} \text{ } \cancel{\text{m}}}{1 \text{ } \cancel{\text{nm}}} \times \frac{1 \text{ } \overset{\circ}{\text{A}}}{1 \times 10^{-10} \text{ } \cancel{\text{m}}} = 6.53 \times 10^3 \text{ } \overset{\circ}{\text{A}}$$

$$3) \ 6.375 \text{ } \cancel{\text{pint}} \times \frac{1 \text{ } \cancel{\text{gal}}}{8 \text{ } \cancel{\text{pint}}} \times \frac{3.785 \text{ } \cancel{\text{L}}}{1 \text{ } \cancel{\text{gal}}} = 3.016 \text{ } \cancel{\text{L}}$$

$$4) \ 0.75 \text{ } \cancel{\text{ton}} \times \frac{2000 \text{ } \cancel{\text{lb}}}{1 \text{ } \cancel{\text{ton}}} \times \frac{1 \text{ } \cancel{\text{kg}}}{2.20 \text{ } \cancel{\text{lb}}} = 680 \text{ } \cancel{\text{kg}}$$

$$5) \ 3.89266 \times 10^{-17} \text{ } \cancel{\text{lb}} \times \frac{1 \text{ } \cancel{\text{kg}}}{2.20 \text{ } \cancel{\text{lb}}} \times \frac{1 \text{ } \cancel{\text{amu}}}{1.6606 \times 10^{-27} \text{ } \cancel{\text{kg}}} = 1.07 \times 10^{10} \text{ } \cancel{\text{amu}}$$

$$6) \ 8.00 \text{ } \cancel{\text{ft}} \times \frac{12 \text{ } \cancel{\text{in}}}{1 \text{ } \cancel{\text{ft}}} \times \frac{2.54 \text{ } \cancel{\text{cm}}}{1 \text{ } \cancel{\text{in}}} \times \frac{1 \times 10^{-2} \text{ } \cancel{\text{m}}}{1 \text{ } \cancel{\text{cm}}} \times \frac{1 \text{ } \cancel{\text{\mu m}}}{1 \times 10^{-6} \text{ } \cancel{\text{m}}} = 2.44 \times 10^6 \text{ } \cancel{\text{\mu m}}$$

$$7) \ 26.22 \text{ } \cancel{\text{mile}} \times \frac{1.609 \text{ } \cancel{\text{km}}}{1 \text{ } \cancel{\text{mile}}} \times \frac{1 \times 10^3 \text{ } \cancel{\text{m}}}{1 \text{ } \cancel{\text{km}}} \times \frac{1 \text{ } \cancel{\text{mm}}}{1 \times 10^{-3} \text{ } \cancel{\text{m}}} = 4.219 \times 10^7 \text{ } \cancel{\text{mm}}$$

$$8) \ 2.336 \text{ } \cancel{\text{gal}} \times \frac{3.785 \text{ } \cancel{\text{L}}}{1 \text{ } \cancel{\text{gal}}} \times \frac{1 \text{ } \cancel{\text{nL}}}{1 \times 10^{-9} \text{ } \cancel{\text{L}}} = 8.842 \times 10^9 \text{ } \cancel{\text{nL}}$$

### Problem Solving:

$$9.536 \times 10^{10} \text{ } \cancel{\text{lb}} \times \frac{453.59 \text{ } \cancel{\text{g}}}{1 \text{ } \cancel{\text{lb}}} \times \frac{1 \text{ } \cancel{\text{cm}}^3}{1.84 \text{ } \cancel{\text{g}}} \times \left( \frac{1 \times 10^{-2} \text{ } \cancel{\text{m}}}{1 \text{ } \cancel{\text{cm}}} \right)^3 = 2.35 \times 10^7 \text{ } \cancel{\text{m}}^3$$

$$2.500 \times 10^6 \text{ } \cancel{\text{L}} \times \frac{1 \text{ } \cancel{\text{mL}}}{1 \times 10^{-3} \text{ } \cancel{\text{L}}} \times \frac{1 \text{ } \cancel{\text{cm}}^3}{1 \text{ } \cancel{\text{mL}}} \times \left( \frac{1 \text{ } \cancel{\text{in}}}{2.54 \text{ } \cancel{\text{cm}}} \right)^3 \times \frac{1 \text{ } \cancel{\text{s}}}{54.5 \text{ } \cancel{\text{in}}^3} \times \frac{1 \text{ } \cancel{\text{hr}}}{3600 \text{ } \cancel{\text{s}}} \times \frac{1 \text{ } \cancel{\text{day}}}{24 \text{ } \cancel{\text{hr}}} = 32.4 \text{ } \cancel{\text{day}}$$
